

Approved Antimicrobial Fabrics

Why antimicrobial fabrics?

Antimicrobial fabrics are fiber-based materials imbibed with antimicrobial agents, which have either been applied to the surface or infused into the fibers to inhibit the growth of microorganisms. These fabrics can prevent bacteria from thriving on your furniture while protecting from stains and unpleasant odors. Also, antimicrobial fabrics require less washing, making them an environmentally-friendly choice.

Testing Fabrics

Not sure if a fabric is a good fit for a product? We'd be happy to test it for you. To test any new fabric, email sales@venueindustries.com include the fabric manufacturer, name of the pattern and the Venue Industries product. We'll either let you know if it has been tested before, if not you may send any fabric samples to:
3212 N. 40th St. #103B, Tampa, FL 33605

Yardage Requirements

A majority of fabrics of narrower widths, patterns, and directional aspects will most likely require additional yardage. Our yardage requirements are standardized by our use of 54 inch bolts of plain goods materials. All of our fabrics are applied to obtain the best yield, unless otherwise specified.
